

REMARKS/ARGUMENTS

According to the invention of new claim 30, both control voltages are equal to each other, and also to the nominal voltage. The invention of claim 30 is disclosed in the specification. Paragraph 43 states that "the two window limits can be positioned symmetrically... about the nominal voltage" and further that "the lower window limit can be positioned ... equal to the upper window limit." From these statements, it follows that all three voltages can be equal.
